1.1 Introduction

Welcome to the documentation for a Demo Software Solution based on Products and their Categories. This document serves as a comprehensive guide to understanding the design, functionality, and implementation details of the Demo as per the technical requirements provided. It is intended for developers, stakeholders, and any other interested parties.

1.2 Project Overview

This Demo is structured as a .NET Core solution consisting of three projects:

API: This project provides endpoints for managing products (Create, Read, Update, Delete), categories (Create, Read, Update only), and user Authentication and Authorization (Registration and Login).

Client: The web client facilitates user registration, login, and interaction with the API endpoints for managing products and categories.

Model: Used to define the required classes for the products, categories and others.

1.3 Objectives

The main objectives of this Demo are:

- To provide a robust API for managing products and categories.
- To offer seamless user authentication and authorization.
- To ensure data integrity and security through proper validation and logging mechanisms.

1.4 Purpose of Documentation

This documentation aims to provide a comprehensive understanding of the project's design, architecture, and functionality. It includes various diagrams, such as Class Responsibility Collaborator (CRC) cards, Enhanced Entity Relationship Diagram (EERD), Context Diagram, Data Flow Diagram (DFD), Use Case Diagram, and Class Diagrams. Additionally, it outlines the database design and provides insights into the relationships between different components of the system.

1.5 Audience

This documentation is intended for:

- Developers involved in the implementation and maintenance of the project.
- Project stakeholders seeking a deeper understanding of the project's architecture and functionality.

- Quality assurance teams involved in testing and validation processes. Any other individuals interested.

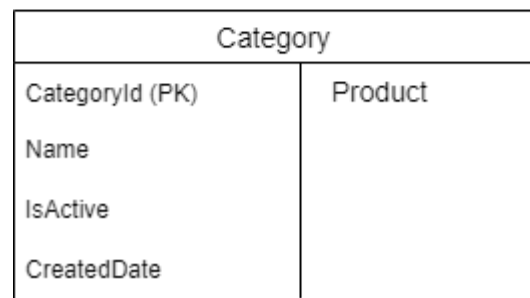

1.6 Functional Requirements

These functional requirements outline the key features and behaviours expected from the software. They serve as a guideline for the development to implement the desired functionality effectively.

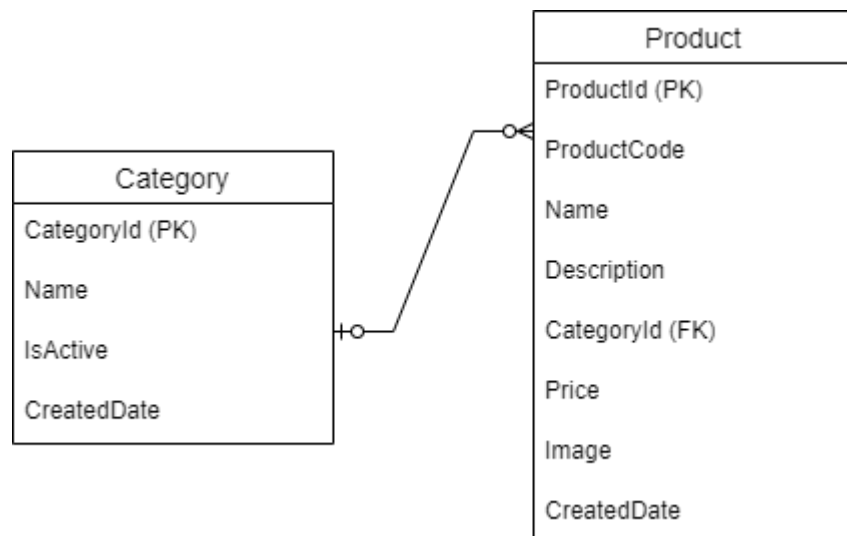

- **User Registration:** Users can register on the web application using their email and password.
- **User Login:** Registered users can log in using their email address and password.
- **Category Management:** Users can view, add, and edit categories.
- **Category Code Validation:** When adding or editing a category, the user must enter a unique category code containing three alphabetic letters followed by three numeric characters (e.g., ABC123).
- The system validates the category code format and displays an error message if it is incorrect.
- **Product Management:** Users can view, add, edit, and delete products.
- Product display is paginated with a page size of 10 items.
- **Category Assignment:** When adding or editing a product, users can select a category for the product from the available categories.
- **Product Code Generation:** Each product is assigned a unique product code generated based on the year, month, and a sequential code (e.g., yyyyMM-###). For example, 202105-023.
- **Image Attachment:** Users can add an image against each product.
- **Excel Spreadsheet Upload and Download:** Users should be able to upload an Excel spreadsheet containing product data. Users should be able to download an Excel spreadsheet containing product information.

2.1 Designing

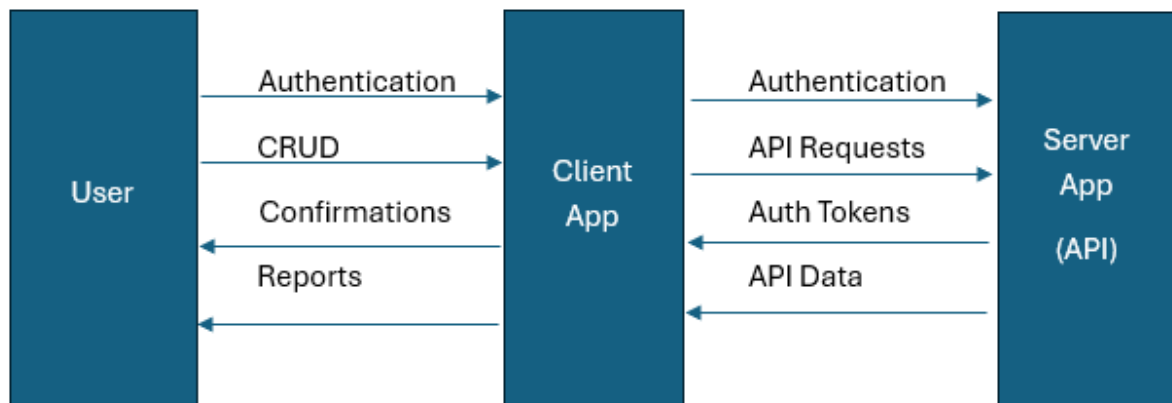

2.1.1 Class Responsibility Collaborator (CRC) Cards

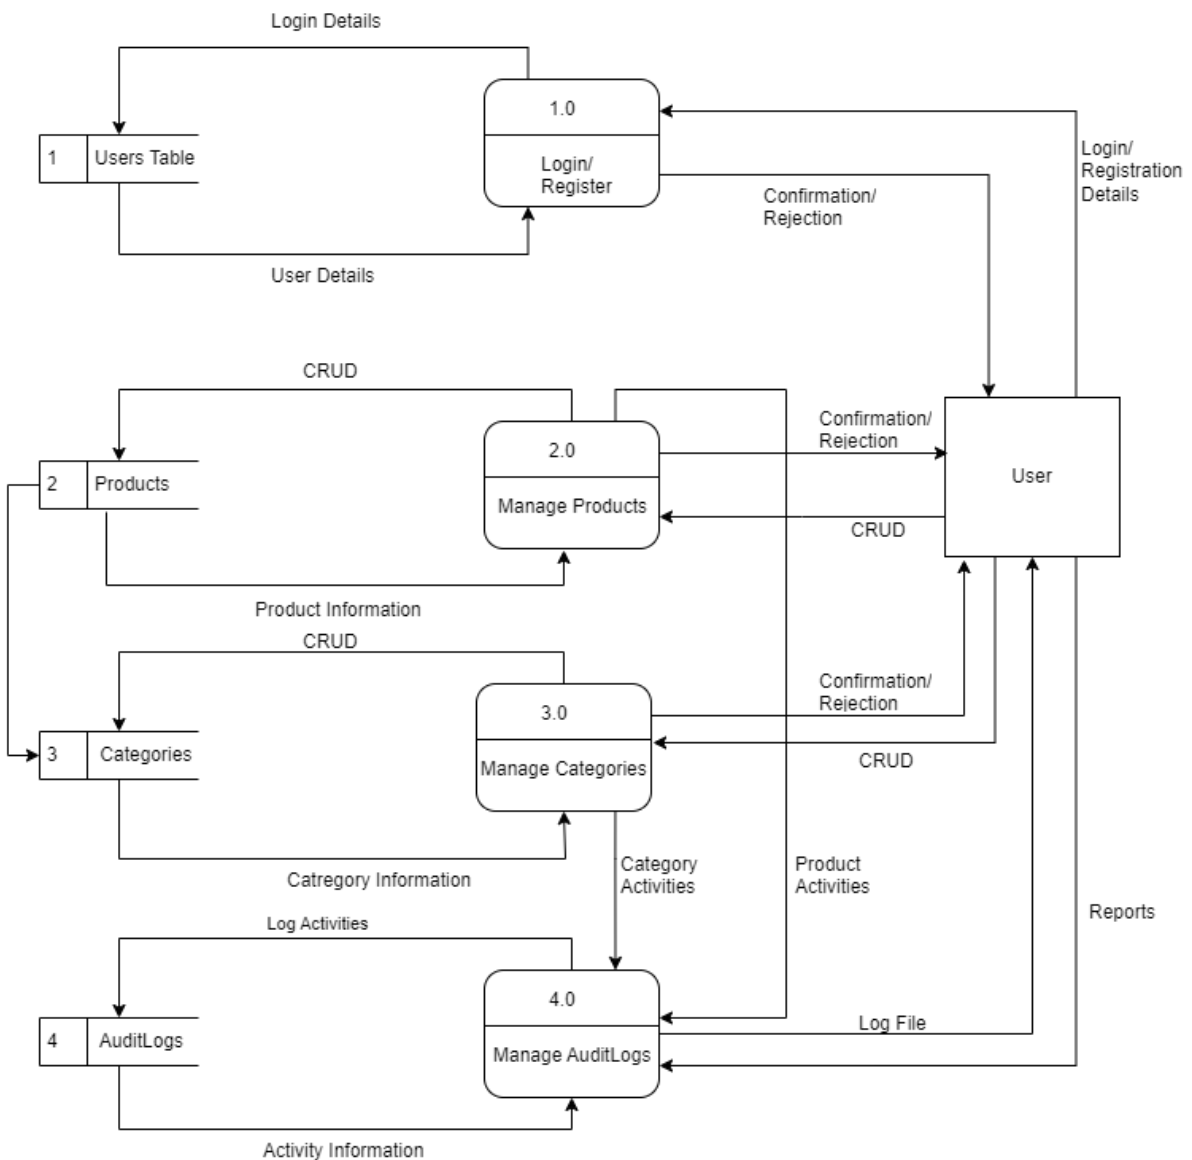

2.1.2 Enhanced Entity Relationship Diagram

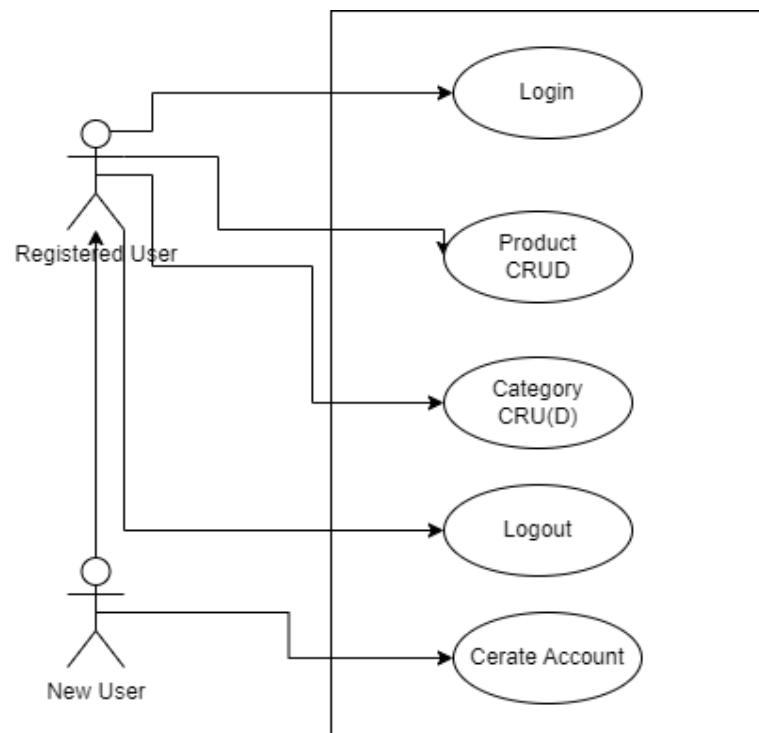

2.1.3 Context Diagram

2.1.4 Data Flow Diagram

2.1.5 Use Cases

2.1.6 Data Base Design

categories	
id 🔗	integer
email	varchar
password	varchar
created_at	timestamp

users	
id 🔗	integer
email	varchar
password	varchar
created_at	timestamp

products	
ProductId 🔗	integer
ProductCode	varchar
Name	varchar
Description	varchar(null)
CategoryId	integer
Price	varchar
Image	varchar(null)
CreatedDate	timestamp

3.1 System Initial Setup

3.1.1 Install .NET Core SDK:

- Visit the official .NET Core website (<https://dotnet.microsoft.com/download>)
- to download and install the .NET Core SDK for your platform (Windows, macOS, or Linux).
- Follow the installation instructions provided on the website to complete the installation process.

3.1.2 Choose an Integrated Development Environment (IDE):

- Select an IDE for .NET Core development. Popular options include Visual Studio, Visual Studio Code, and JetBrains Rider.
- Download and install the chosen IDE from their respective websites.
- You are recommended to use Visual Studio

3.1.3 Database Management System Installation:

- This project is based on the MS SQL Server database management system.
- You can download and install SQL Server 2022 from the official website (<https://www.microsoft.com/en-us/sql-server>)
- Alternatively, you can opt for the MySQL Database Management System (<https://www.mysql.com/>)

3.1.4. Running the System

- Download the Master project file from the github link provided or use the one emailed.
- Unzip the project and save it preferably in C://Projects or any other location of your choice.
- Open Visual Studio, and select the path to where you saved the project.
- Make sure that the solution is set to <Multiple Startup Projects> by setting the API and Web projects at the startup projects, with the API starting up first as shown below:

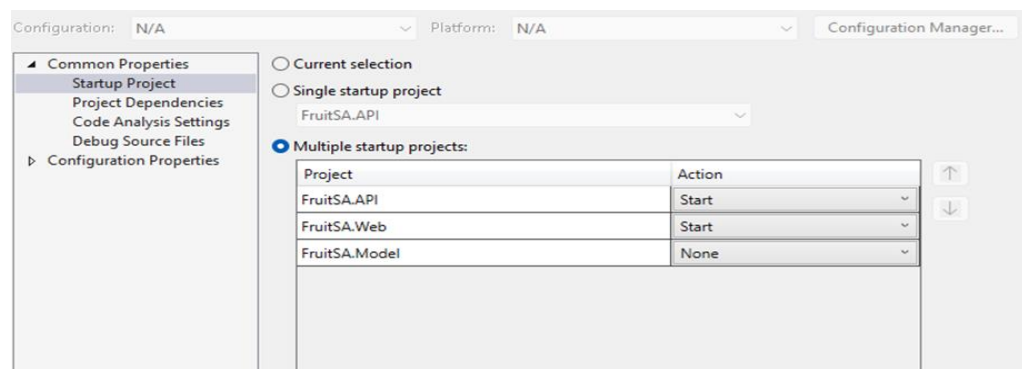

Figure 3.1 Source: Z. Taruvinga

3.1.5 Database Setup

- Depending on your database management system as specified on section **3.1.3 above**, setup your Connection String in the **appsettings.json** file of the API Project.
- You can manually create your database using the provided .bak file or run the Update-Database command from the Package Manager Console.

Once you have the system and the database configure, you can run the system and move on to the user-manual section below:

4.1 User Manual

Welcome to the user manual for the Demo System. This manual serves as a comprehensive guide to assist users in understanding and effectively utilizing the features and functionalities of our software system. Whether you're a new user looking to get started or an experienced user seeking advanced insights, this manual provides the necessary information to maximize your experience.

4.1.1 How to Use This Manual

This manual is organized into sections, each focusing on specific. Users can navigate through the manual using the table of contents or by directly accessing relevant sections based on their specific needs or interests. Additionally, the manual includes illustrations, screenshots, and examples to facilitate understanding and enhance the user experience.

4.1.2 User Registration

- Click on the registration link on the Navigation and complete the form that follow.
- Provide a valid email address and strong password that meets the following:
 - i. must have at least one digit 0 - 9
 - ii. must have at least one uppercase A - Z
 - iii. must have at least one lowercase a – z
 - iv. must have at least one special character.

REGISTER
Email address
<input type="text"/>
Password
<input type="password"/>
Confirm Password
<input type="password"/>
<div>Register</div> <div>You have an account? Login</div>

REGISTER
Email address <input type="text"/> The Email field is required.
Password <input type="password"/> The Password field is required.
Confirm Password <input type="password"/> The ConfirmPassword field is required.
<div>Register</div> <div>You have an account? Login</div>

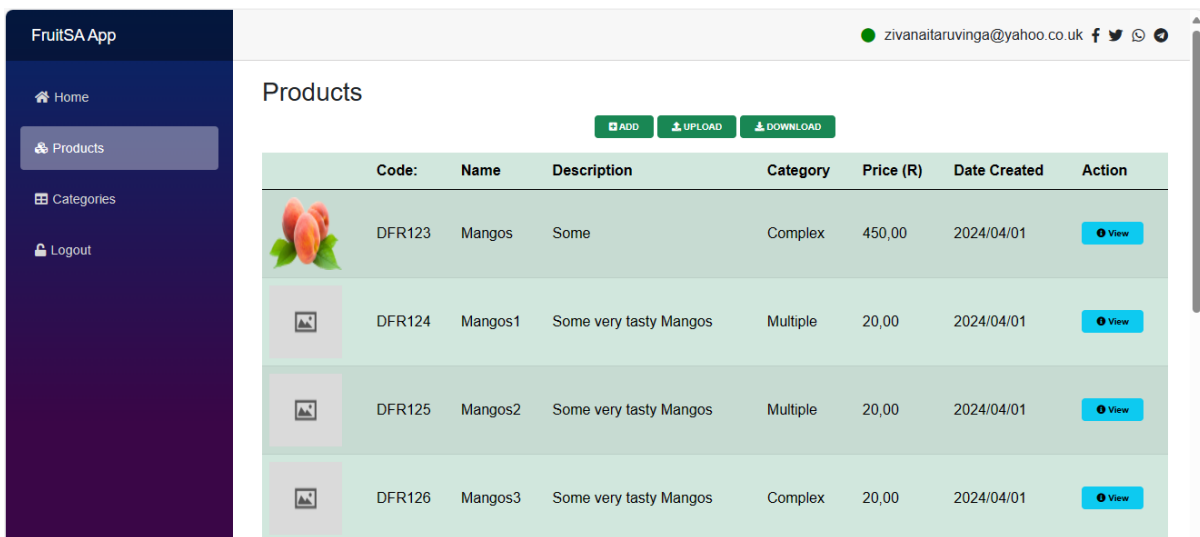

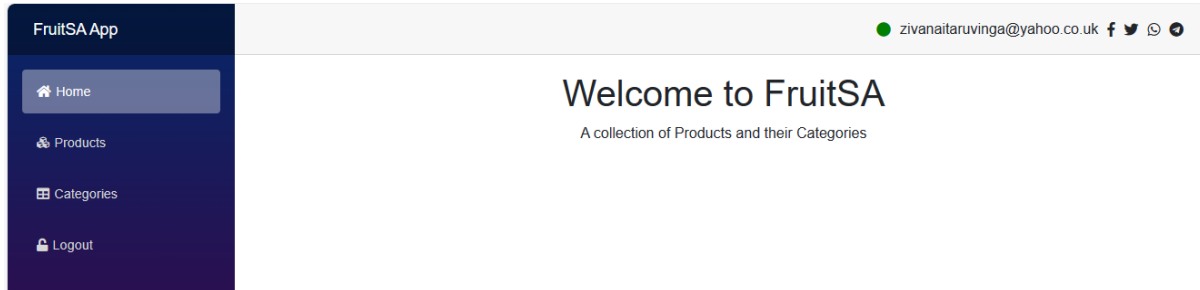

4.1.3 User Login

- Click on the Login option on the Navigation and login with your email address and password:

LOGIN
Email address <input type="text" value="zivanaitaruvunga@yahoo.co.uk"/>
Password <input type="password" value="....."/>
<div>Login</div> <div>Don't have an account? Register</div>

4.1.4 User Dashboard and Navigation

- When you login successfully, the following dashboard will be displayed where you can Add, Update, Display and Delete Products and Categories(can not delete categories).

Add Product

Product Code:

4.2 Tools Used

The following tools were used in the development of the system:

- Microsoft Visual Studio 2022
- MS SQL Server 2022
- ASP.Net Core
- Blazor
- C#
- HTML 5
- CSS
- JavaScript
- Bootstrap
- Fontawesome
- Nuget Package Manager and Packages.

4.3 Conclusion

We hope that this manual has provided you with valuable insights and guidance on how to effectively use the demo software to meet your needs and achieve your goals.

We value your feedback and suggestions for improvement. If you have any ideas for enhancing the system or if there are features you would like to see added in future releases, please let us know. Your input helps us continually enhance and refine our software to better serve your needs and preferences.
